PROFILE

Highly motivated and detail-oriented Data Science undergraduate with hands-on experience bridging the gap between advanced analytics and software engineering. Proficient in full-stack web development, statistical modeling, and integrating machine learning pipelines into secure, scalable applications. Currently pursuing a BSc (Honours) in Information Technology specializing in Data Science at the Sri Lanka Institute of Information Technology (SLIIT) and seeking an internship to leverage robust technical and analytical skills in a dynamic, innovation-driven environment. Recognized for adaptability, creative problem-solving, and a strong commitment to transforming complex data into secure, efficient, and user-centric digital solutions.

PROJECTS

- **Dengue Risk Prediction System:** Built a time-series forecasting model using SARIMAX incorporating weather and biological lag features, integrated with a React Native mobile frontend.
- **Modular Web Security Framework (SecureKit):** Developed a security framework for web applications featuring an authentication engine, audit telemetry, AES-256-GCM encryption, JWT authentication, 2FA, and geo-blocking.
- **Autism Spectrum Disorder (ASD) Prediction System:** Developed a web application using the MERN stack integrated with a Python-based AI microservice. Engineered a machine learning pipeline training Random Forest and SVM models on clinical datasets for binary classification based on AQ-10 behavioral scores and deployed the predictive service using Fast API and Docker.
- **Custom T-Shirt Designer Platform:** Built an all-in-one e-commerce platform with a comprehensive admin panel using the MERN stack, featuring an interactive SVG customization library and integrated AI for generating custom designs and product mockups.
- **Smart Hardware Management System:** Created a web-based platform with MERN stack for tracking and maintaining hardware assets including a admin dashboard and customer and supplier specified portals.
- **Smart Campus System:** Collaborated within a development team to build a campus management application, utilizing modern frameworks such as React and Spring Boot while managing version control via Git.
- **Auto Triage AI System:** Built an agentic AI solution using multi-agent LLM workflows and NLP techniques (NER, semantic retrieval) to interpret diagnostic text, automate vehicle triage, and streamline spare parts matching from specialized datasets.

EDUCATION

Royal College – Colombo 07	Sri Lanka
● G.C.E. Advanced Level Physical Science stream 2013 -	2021
Sri Lanka Institute of Information Technology (SLIIT)	Sri Lanka
● Bachelor of Science (Honours) in Information Technology Specialized in Data Science	2023 - Present

SKILLS

- **Languages:** English (fluent)
- **Soft Skills:** Leadership, Critical Thinking and Analytical Skills, Effective Communication, Organizing, Planning and Coordination, Adaptability, Teamwork, Time Management, Attention to Detail, Problem Solving
- **Professional Skills:** C, C++, Java, HTML5, CSS, JavaScript, React, React Native, TypeScript, Node.js, Spring Boot, Python, MySQL, MS SQL Server, Oracle SQL, R Programming, Project Management Tools (JIRA, Confluence, Trello, Hive), Data Science & Machine Learning(**Frameworks:** TensorFlow, scikit-learn, **Statistical Analysis:** ANOVA, Regression modeling, **Concepts:** Predictive Modeling, Time-Series Forecasting (SARIMAX), Support Vector Machines (SVM))
